Of course, the market for photo editing software is one of the most competitive, because there is such a big choice of options. Adobe Photoshop has long been the market leader, and is still the program of choice for many people who work with images on a daily basis. In some ways, we don't need to look anywhere else, because there's so much that's been built into Photoshop over the years. But the new CC version, and a new Lightroom processing application, give us a peek into what's on the horizon. There are increasingly sophisticated options available, and these can be a big help to people with less experience using Photoshop. And here, I think, software vendors can sum themselves up by looking at what their customers have to say rather than their own users. The survey from NPD Research has clearly demonstrated that the vast majority of the respondents had good things to say about Adobe. Enough people bought Lightroom to make it the fourth most popular photo editing software on the market. I've been using it for years, and it never ceases to surprise me how something I've designed so imperfectly can be so easy to use and so effective. Sure, Lightroom 5 adds a few new, useful features as well as some small quirks here and there. But unless you hate your photos and are so disheartened with your image editing choices that you are actively looking for a crackpot solution, you will probably come away from this review thinking that Lightroom 5 is a success.
