Ariel Gray, digital artist and educator, is currently an art director and educator specializing in fashion illustration and industrial design.

Take a look at Ariel Gray's work on InstaCreativ here: [InstaCreativ] Lightroom and Photoshop are not only very similar. Adobe seems to have reworked quite a few features to be more approachable for those who usually work with their desktop version. The old format of "develop" and "output" are no longer available. A new "Catch" and "Save" buttons can be found on the main "File" menu. This would be a welcome change for those users who wanted to simply copy the entire image at the Capture stage. Even though the toolbox is better organized, it is still a little unclear to newcomers to Photoshop, especially when they are used to getting the interface to work the other way around. Older users have nothing to worry about, after all. They will still easily find the features they are used to and those they are looking for and can simply click the right buttons to get them. Naturally, others will also spend some time figuring out the basic interface, but that is one of the perks of using a "new" product. Switching tabs while browsing the features is also easier, as we now see three separate boxes within the image editing and image development features. Lightroom users will feel right at home here, of course. I believe that this new approach to the Adobe software is a great idea that will surely benefit the sales of both Lightroom and Photoshop to some degree. I have never been thrilled with the original "develop," "output" and "save as" workflow. I would much rather see Lightroom make the more traditional "File" menu work first, and then, only after that, start manipulating images. This makes Lightroom more intuitive when it comes to how to actually work with images.
